Cneoridium dumosum (Nuttall) Hooker f. Collected March 26, 1960, at an
Elevation of about 1450 Meters on Cerro Quemazón, 15 Miles South of Bahia
de los Angeles, Baja California, México, Apparently for a Southeastward
Range Extension of Some 140 Miles.

I got it there then (8068).

I wish to express my sincere thanks to the San Diego Museum of Natural History
and particularly to its director, Dr. George E. Lindsay, for making possible the trip
on which this interesting specimen was collected; to my companion of the trip, Mr.
Glen Ives, then staff artist of the Museum but functioning on the trip as collector of
birds and mammals, for much help and encouragement during the field work; to
Señor Ricardo Daggett of Bahia de los Angeles, majordomo of the Vermilion Sea
Field Station of the San Diego Museum of Natural History, for help in planning and
arranging the trip; and to Señor Pepe Smith and his 14-year-old son Favian, both
of Bahía de los Angeles, who packed us into the mountains, for many courtesies ex-
tended. I am very grateful to Miss Anita Carter, Principal Herbarium Botanist of the
University of California, Berkeley, for graciously verifying my determination of the
specimen. I also wish to extend my thanks to the editor of the publications of the
San Diego Society of Natural History for his many helpful suggestions during the
compilation and processing of the data and the writing of the manuscript; to Dr.
Helen K. Sharsmith, Señora Herbarium Botanist of the University of California,
Berkeley, for her valuable suggestions on expanding the discussion and making the
title more precise; to Mrs. Jerry Heller of the Museum staff for her very careful and
accurate typing and retyping of the manuscript; and to Mrs. Rosemarie Fiebig of
the Museum staff for taking the final manuscript to the post office for mailing. I must
also express my deep gratitude to all my former mentors, to whose excellent instruc-
tion and training must ultimately be attributed any merit that this unworthy con-
tribution may possess, although, needless to say, any errors are my own: in particular,
I would name Professor Ira L. Wiggins and the late Professor LeRoy Abrams, of
Stanford University; Professor Robert T. Clausen, of Cornell University; and Pro-
fessors Lincoln Constance, Herbert L. Mason, and G. Ledyard Stebbins, of the Uni-
versity of California, Berkeley. Last but not least, I cannot fail to mention my deep
indebtedness to my parents, without whose early cooperation this work would never
have been possible.—Reid Moran, Museum of Natural History, San Diego, Cali-
ifornia.

Publications of Marcus E. Jones Available.—Recent correspondence with Mrs.
C. A. Broaddus, a daughter of the noted western botanist, Marcus E. Jones, reveals
that several of her father's botanical contributions are still available to those inter-
ested in purchasing them. These papers are of considerable historical as well as botan-
ical interest and have been virtually unattainable from bookdealers in the past few
years. The following works are in print: Ferns of the West (1882); Contributions to
Western Botany, nos. 7, 8, 9, 13, 14, 15, 16, 17 and 18; Montana Botany Notes (1910);
and Astralagus, Revision of the North American Species (1923). Correspondence re-
garding these publications should be directed to Mrs. C. A. Broaddus, P.O. Box A-1,
Carmel, California.—Robert Ornduff, Duke University, Durham, North Carolina.
